# product specification

radio interference suppression filter: NFK12-1A21

High insertion loss over a broad frequency range
Extra slim enclosure design, only 22.5mm wide
Self-extinguishing polycarbonate housing acc. to UL94V1
Suitable for the tropics - epoxy resin casted
Safety acc. to VDE, EN, UL, CSA

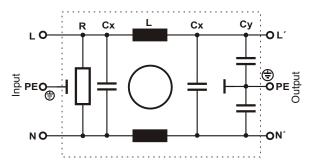

# **Application**

Filters of the NFK12-1A21 series are used to suppress circuit-bound interferences in AC power lines.

Interference pulses or interference voltages are dampened independently from their point of origin.

The filters are build with 1 stage and have a high insertion loss on a wide frequency range.

#### typical connection scheme

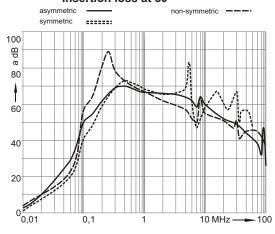

### **Functional principle**

The filters of the NFK12-1A21 series are connected between the AC voltage supply and the consumer, which is susceptible to interference.

Because of the combination of chokes and film capacitors of the classes "X" and "Y", an effective suppression on a wide frequency range is achieved (typical connection scheme see above).

#### Insertion loss at 50

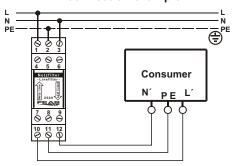

# Design

Integrated into a plastics housing for mounting on a rail acc. to DIN 46277.

Please read the data sheets and the operating instructions for further information.
