Product specification Redundancy module RZM01-100

Application

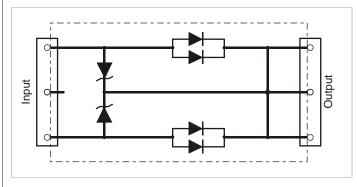

FEAS Redundancy modules of the series RZM provide the decoupling of two identical DC-Powersupplies in order to either increase the output power or achive a higher degree of system stability.

In case of mains power failure or an internal defect of one power supply, the other power supply is still feeding the DC-circuit without interruption. For this, the performance of the used power supplies are calculated in a way, that all consumers can be powered with just one DC-power supply.

With this method, the operational reliability of the whole system is effective enhanced.

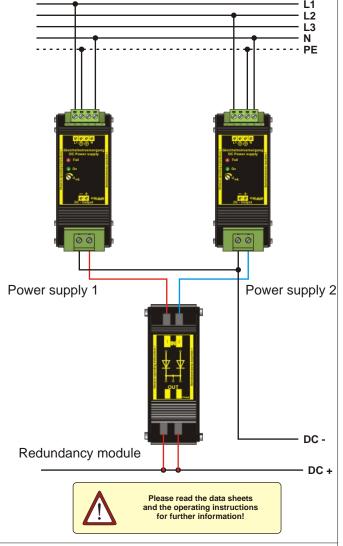

Operational principle

By using of two diodes, the power supplies will be seperated from each other.

Version

Installed and completely potted in an aluminum case for direct mounting on 35mm DIN-rail.
